

METHOD OF PREPARATION AND SHIPMENT

Hereunder the steps to prepare and ship a product in top quality:

- Sample analysis of the incoming raw materials in our chemical laboratory
- Processing and mixing of the various components in one plant of our specific production entirely made of polypropylene so as not to contaminate the etching mixture with metal scraps that alter the quality of etching
- Random testing of the finished product on our automatic etching machine during normal production process
- Packaging in approved bags of 25 kg / each
- Preparation of specific pallets and stackable for transport by sea and by land (weight of each pallet 1,000 kg)
- Possibility of direct shipment or through our warehouse in Italy
